EXPERIENCE

SilverOak Apps

Machine Learning Intern, Melbourne VIC

March 2025 - December 2025

- Cut question-classification latency 96.7% (6s to 0.2s, 30x faster) by replacing a per-request LLM call with an embedding-based semantic router, eliminating that model call from every request.
- Built modular model classes so new question types and providers plug in without touching routing logic, owning prompt engineering and end-to-end feature and guardrail testing pre-release.
- Built a Go price-resolution API serving sub-50ms in production, with a 7-tier candle-interval fallback, automatic non-USD forex conversion and token auth, covered by unit tests.
- Replaced a slow manual feed-collection process with a TypeScript RSS fetch and parse service on an AWS cron schedule, plus a scraping module feeding the same ingestion pipeline.

Zelo Agents

Co-Founder & Developer, Melbourne VIC

July 2025 - March 2026

- Rebuilt a Melbourne martial-arts gym's multi-page static site as a paid Next.js 15 / TypeScript / Tailwind single-page app with sign-up and contact forms; monthly visits grew from 500 at launch to 9,000+ over 8 months, with the client reporting a 35% increase in trial bookings.

Freelance Web Developer

Independent Contract, Melbourne VIC

December 2025 - Present

- Built, deployed and maintain drvcancercare.com for an overseas oncologist with a 300,000+ following on socials, running with zero downtime since launch across enquiry forms, content updates and deployments.

PROJECTS

MyPowerPlant - React, TypeScript, FastAPI, AWS Lambda, Terraform

- Advisory tool for Victorian households deciding whether to join a Virtual Power Plant, computing savings in-browser so answers never leave the device.
- Provisioned the stack in Terraform (CloudFront over private S3, arm64 Lambda, ECR, SSM) with GitHub Actions OIDC deploys, no long-lived AWS keys and SHA-tagged rollback.

Sea Anchor - FastAPI, React, deck.gl, DuckDB, Docker

- Recommender for where fishing vessels operate, testing whether collaborative filtering transfers to sparse implicit feedback: ALS hit 0.081 precision @10 vs 0.004 for a popularity baseline, 20x, on a temporal split with a leak check.
- Served as a 10-endpoint REST API with typed Pydantic contracts and a stub backend, letting the frontend be built against the final schema before the model existed.

SKILLS

Languages	Python, TypeScript, JavaScript, Go, SQL, HTML/CSS
Web	React 19, Next.js, Tailwind CSS, FastAPI, Go (net/http), REST API Design, PostgreSQL, MongoDB
Cloud & DevOps	AWS (Lambda, S3, CloudFront, ECR, IAM), Terraform, Docker, GitHub Actions CI/CD

EDUCATION

Master Of Data Science, Monash University, Melbourne

2025 (March) - 2026 (November)

ADDITIONAL EXPERIENCE

JB Hi-Fi / Retail Safari (Microsoft + Meta)

Retail Sales Assistant & Brand Specialist, Melbourne VIC

July 2025 - Present

- Represented Microsoft and Meta as Product Specialist and Brand Ambassador across three JB Hi-Fi stores, selling tech and smart-home automation to 15-20+ customers per shift while translating complex concepts into plain language and handling real-time objections.
